

IB9AU0 Generative AI and AI Applications
2025-2026

Group Assignment Question and Guidance

You will need to produce 2 outputs, 1250 words in total.

1. 1000-word essay
 2. 250-word one-page summary
-

1000-word essay:

Produce a high-quality, real-world-style FinTech deliverable by completing one task drawn from the publicly available GDPval “Task Bank” (<https://openai.com/index/gdpval/>). The tasks come from **real professionals** with many years’ experience — not synthetic questions or toy tasks. The test bank is available at <https://huggingface.co/datasets/openai/gdpval?>

Your group needs to select a task relevant to FinTech (Finance and Insurance, Real Estate and Rental and Leasing) and build an AI-augmented pipeline (for example, RAG, optional fine-tuning, optional agent orchestration), and produce the required deliverable.

1. Task selection

- Review the publicly available GDPval Task Bank.
- Choose one task whose context and deliverable align with your group’s interests/skills.
- Notify instructor of your chosen task (first-come, first-served) to minimise duplication across groups.

2. Deliverable requirements

- Use the provided context/reference files from GDPval for the chosen task.
- Produce the deliverable in the format specified: e.g. Word / PDF memo, spreadsheet, slide deck, report.
- You must document: retrieval / data-sourcing / chain-of-thought / prompt-engineering / any tool-use / generation steps.
- Include a short “notes log” showing your data pipeline / prompts / edits / human review.

3. Evaluation plan

- Create a simple rubric for quality: correctness, completeness, clarity, format, usefulness (suitable for intended audience).

4. Reflection & risk assessment

- Comment on:
 - What worked well / what failed.
 - Where the AI (or human + AI) combo struggled.
 - How a real professional would validate or correct your output.
 - Ethical, legal, or data-quality risks, limitations, and mitigation ideas (e.g. hallucination, mis-interpretation of data, compliance risk, data provenance).
-

You need to submit a **final deliverable** (notebook, demo, small prototype, or design document), plus a write-up summarizing what you did, what you learned, and potential next steps. You are free to include the write-up as part of your code notebook.

Additional Notes

- The GDPval tasks are real-work style — treat them like an assignment from a “real client.”
 - You are encouraged to use AI tools (LLMs, embedding / retrieval, summarizers, etc.), but you must document all steps, and do a manual review & cleaning of AI outputs before submission.
 - For tasks involving confidential-style content (e.g. customer data, personal data), ensure you do not use real personal data — just the files provided in GDPval; do not add sensitive content. You can create synthetic data if appropriate.
-

Marking Criteria

Completeness of the solution, efficiency of the code, interpretation of the results, and the quality of the narrative.

250-word one page summary

Each Group should submit a one-page executive summary of the project.

Maximum Length:	1250 words (this is a strict limit, not a guideline)
Submission Format:	The group project should be submitted as one-file zip file containing the narrative, code, any data, and one-page executive summary of the project. The students should combine all files with a zip file with the following naming format: group_number_X.zip Where X is your given group number. You should ensure your submission includes a completed Group Work coversheet which is available in your student handbook. One member of each group should make the submission on behalf of the whole group.
Assessment Weighting:	20%
Submission Deadline:	19/03/2026 12:00 PM (UK time)
Marks Released by:	20/04/2026 (we will aim to release marks by this date, but in the event of an unavoidable delay a message will be posted on the module page)

Use of Artificial Intelligence

The University recognises an increasing number of technologies such as Artificial Intelligence and that they may be applicable in your completing this assessment. The assessment brief sets out specific requirements or restrictions, and your student handbook has further guidance and advice.

You are reminded that the inappropriate use of such a technology may constitute a breach of University policy, such as the Proofreading Policy or Regulation 11 (Academic Integrity). If you breach these policies, it may have significant consequences for your studies. Please make sure you read and understand the assessment brief and how AI may or may not be used.

You should ensure you include an assignment cover sheet which requires you to explain the use of any AI. Failure to disclose at the point of submission may be prejudicial in any later investigations should they arise.

For this assessment, AI is: **REQUIRED**

You **MUST** set out clearly in your submission how you used the tool/service and You **MUST** set out clearly what output from the tool/service has been included, and where you have altered, adopted or built on that output.

Submitting your work

Before you submit your assessment, you should ensure you are familiar with the guidance and rules in the “Your Assessments” section of your Student Handbook, paying particular attention to:

- Inserting a completed assignment coversheet as the first page of your submission
 - Academic Integrity (including Plagiarism)
 - Referencing
 - Word Count Policy and Formatting
 - Confidentiality of your work
 - Extensions and late submission of work
 - Guidelines for Online Submission
-

Mitigating Circumstances

Mitigating circumstances **MUST** be submitted **within 20 working days following the submission deadline**. Mitigating circumstances not submitted by the relevant deadline are not required to be considered by the School/Department and may have to be considered by an Academic Appeals Committee as part of an academic appeal – for further information, please see:

<https://warwick.ac.uk/services/gov/calendar/section2/regulations/reg42academicappeals>

Please see your Student Handbook for more guidance on mitigating circumstances
